About Ensim Pro

Ensim Pro is a robust control panel solution for small and large professional hosting providers. Ensim Pro includes all the tools and features that you, as a hosting provider need, in order to build compelling, commercial-quality plans for shared and reseller hosting.

With Ensim Pro, you can:

- Define targeted, compelling site templates for shared site and reseller hosting. By defining a site template once, you can establish new customers quickly, while controlling application settings and resource quotas.
- Customize the look and feel of the control panel to suit your branding preferences.
- Review detailed reports of bandwidth and disk usage per site and allow accurate and complete billing of all traffic used by sites.
- Protect shared sites with a virtual private file system and provide additional site security.
- Delegate administration to your customers, including your resellers, site owners, and site users, while simultaneously reducing your support calls and improving customer satisfaction.

Ensim Pro 10.2.0 specifications

Web Services APIs: Ensim Pro 10.2.0 supports Application Programming Interfaces (APIs) for Web Hosting services. Web Services APIs automate common tasks across all service levels such as provisioning resellers, sites and users, and managing services.

Note: The Web Services APIs support **only** the tasks that can be executed through the CLI (Command Line Interface) calls.

Following are the product features for each administrative level.

Topics include:

Server Administrators	2
Reseller Administrators.....	5
Site Administrators.....	6
User Administrators	8

Server Administrators

Table 1. Server Administrator features

Feature/item	Description
